Hovhannes Hovhannisyan

Software Engineer

PROFESSIONAL SUMMARY

Software engineer specializing in mobile and web development. Delivered high-performance applications serving thousands of users and improving product stability and engagement. Experienced in React Native, Expo, and modern web technologies, focusing on scalable and user-centric solutions. Actively exploring AI tools and machine learning to enhance application intelligence and user experiences. Passionate about continuous learning and building impactful digital products

WORK EXPERIENCE

ONEX

Mobile Software Engineer / React Developer Aug 2025 — Present

- Worked on the company's main mobile applications, focusing on feature development, platform-specific reliability, and performance optimization across iOS and Android. Key contributions included improving app stability, implementing new product features, collaborating closely with designers and PMs
- Developed and maintained production mobile applications serving thousands of active users.
- Improved app stability by reducing crash rates through targeted bug fixes and performance enhancements.
- Delivered new features on iOS and Android while collaborating with designers and product teams.
- Optimized performance and user experience by addressing platform-specific issues.

Flash Labs

Founding Software Engineer Jan 2024 — Aug 2025

- As the Founding Software Engineer at Flash Labs AI, I work on development of mobile based ed-tech platforms designed to engage and educate users through gamified learning. Utilizing React Native, we build responsive, high-performance mobile applications that are scalable and user-friendly.
- Designed and implemented features using React Native and Expo, improving user engagement and learning experiences.
- Collaborated with cross-functional teams to deliver high-quality software aligned with product goals.
- Established development processes and architecture foundations for long-term maintainability.

Flash Labs

Junior React / React-Native Engineer Jan 2024 — Aug 2025

- Built and maintained an ed-tech platform by developing web interfaces with React (Next.js) and mobile applications using React Native and Expo.
- Integrated backend services with Node.js and Supabase, enabling data-driven features.
- Improved platform stability and performance through debugging and optimization.
- Collaborated with designers and product teams to deliver intuitive user experiences

- Built and maintained an e-commerce platform enabling subscription-based purchases of Armenian souvenir boxes.
- Developed interactive purchase flows where users selected subscription tiers, customized preferences, and completed orders.
- Implemented payment processing and automated order synchronization with databases and Google Sheets to streamline order management and improve operational efficiency.
- Built subscription-based e-commerce flows improving purchase conversion and user experience.
- Implemented payment integration and automated order processing.
- Synchronized order data with databases and spreadsheets for efficient order management.
- Delivered a smooth, user-friendly purchase experience focused on reliability and scalability.
